PROFILE

Data analyst with experience working on structured datasets, reporting, and performance analysis. Familiar with KPI tracking, workflow analysis, and deriving insights from large-scale operational data.

EDUCATION

Bachelor of Technology in Computer Science and Engineering Jaipur, Rajasthan
Manipal University Jaipur Nov 2021 – Jul 2025
CGPA: 9.27/10 | Dean's List for Excellence in Academics

SKILLS

Analytics	Data Validation, Workflow Analysis, Process Optimization, Funnel Analysis, Cohort Analysis, User Segmentation, Statistical Analysis, Data Visualization, KPI Tracking
Languages	Python, SQL, C++
Tools & Frameworks	Power BI, Google Data Studio, MySQL, MS Excel, Git, APIs, JSON, Pandas, PySpark, NumPy

EXPERIENCE

Capgemini Sep 2025 - Jan 2026
Analyst Trainee | Gurugram

- Worked in a structured enterprise environment focusing on **analytical problem-solving, workflow analysis, and operational processes**.
- Collaborated across team-based assignments involving **Linux systems, debugging workflows, and technical documentation**.

LRDE DRDO Mar 2025 - Jun 2025
Intern | Bengaluru

- Designed a simulation environment modeling real-time radar operations **across 350+ tasks**, generating structured performance data for analysis.
- Evaluated scheduling performance** using KPI metrics such as task completion rate, delay, and constraint violations, enabling performance comparisons across 3 distinct scheduling algorithms.
- Achieved 91%+ task completion** in dynamic scenarios by identifying trade-offs between responsiveness and resource utilization across different scheduling approaches

PROJECTS

RapidKart — Quick Commerce Product Analysis | *Python, SQL, PySpark, Power BI* | [repo](#)

- Developed an end-to-end product analytics case study simulating a quick-commerce platform with over **1M+ event records**.
- Conducted funnel analysis identifying a **42.8% drop-off at Add-to-Cart → Checkout** and found a **−0.615 correlation between delivery time and conversion rate**, linking operations to business outcomes.
- Segmented approx. 10,000 users into 3 behavioral cohorts by tracking DAU (avg 529), conversion rate (19.63%), and 90-day retention.

Pizza Sales Analysis — Business Intelligence Dashboard | *SQL, Power BI* | [repo](#)

- Analyzed sales data using SQL for revenue aggregation, time-based trends, and Pareto analysis, identifying that **~80% of revenue came from a small product subset**.
- Discovered that **weekday sales were ~168% higher than weekend sales**, with peak demand during 12–1 PM and 5–7 PM; translated findings into a Power BI recommendations page to support business decision-making.

ACHIEVEMENTS

- Co-authored **“An Efficient Image Steganography using Spider Monkey Optimization”** published in the *Journal of Discrete Mathematical Sciences & Cryptography (JDMSC)*, 2025

CERTIFICATIONS

IBM Data Analyst Professional Certificate
